Education

Kennesaw State University | *Graduated May 2026*
Kennesaw, GA

Bachelor of Science in Computer Science, Cum Laude

Skills

Programming Languages: Python, Java, Rust, JavaScript, TypeScript, SQL

Technologies and Tools: PostgreSQL, OpenCV, Git, Next.js, React, React Native, Firebase, Nginx, GitHub Actions

Operating Systems: macOS, Windows, Ubuntu, Ubuntu Server

Experience

Assurant | *IT Intern*

Jul 2025 – Present

- Developed a CI/CD pipeline using GitHub Actions to automate deployment and testing for custom connectors integrated into the Lumos application, improving reliability and reducing manual setup effort.
- Built a Power Automate workflow using prompt engineering and call transcript analysis to automatically generate Epics, Features, and PBIs with detailed synopses, acceptance criteria, and effort estimates.
- Designed and implemented improvements to an existing SSL certificate automation process, handling edge cases and increasing reliability for consistent certificate renewal across environments.

Kennesaw State University | *CCSE Tutor*

Aug 2024 – Jul 2025

- Provided academic support for 300+ students in 1000 to 3000 level Computer Science courses, including programming fundamentals, data structures, algorithms, and object oriented programming.
- Assisted CS 1321 lab sessions by helping students troubleshoot code, clarify course concepts, and complete practical programming assignments.

Northside Hospital | *IT Intern*

May 2023 – Aug 2023

- Diagnosed and resolved networking, hardware, and security system issues for a user base of 30,000, helping minimize service disruptions and maintain system reliability.
- Streamlined IT department workflows to reduce ticket turnaround time and improve support team efficiency.

Projects

RiverGuard

Next.js, YOLO, Docker, FFmpeg

- Designed and implemented a computer vision pipeline to detect and classify river debris from video using YOLO based object detection.
- Built a Dockerized backend for frame extraction and model inference, enabling efficient processing of large video uploads.
- Developed data pipelines to store detection results including classes, confidence scores, and bounding boxes for dashboard visualization.
- Collaborated in a 5 person Agile team, contributing to system architecture, API design, and full stack integration.

Babble Bridge

TypeScript, React Native, Express.js, Firestore, Firebase Auth, Nginx, WebSockets

- Placed first at the KSU Hackathon for Social Good by delivering a real time messaging application with automatic translation across 100+ languages.
- Implemented Firebase Authentication and Firestore data models with security rules and role based access for user profiles, chat rooms, and message storage.
- Built Express middleware and an Nginx reverse proxy to support secure room creation, participant management, and optimized database read and write operations.
- Integrated Google Cloud Translation API with automatic language detection for one on one and group chat translation workflows.

Dinos Finance Essential

Python, FastAPI, PostgreSQL, Docker, Next.js, TypeScript

- Built a full stack receipt finance tracker that extracts receipt totals using OCR and stores structured expense data for dashboard analytics.
- Developed a Dockerized multi service architecture with separate OCR, API, PostgreSQL, and Next.js frontend services.
- Implemented username and password authentication with bcrypt hashing, HTTP only session cookies, protected routes, and database backed sessions.
- Added analytics filters for merchant, amount range, and receipt status with backend test coverage and verified frontend builds.
